EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Scott Woodbury on November 19, 2009.

The application has been amended as follows:

Claim 7, delete "in claim 6, wherein a filter" and insert "in claim 1, wherein a second filter".

Claim 13, delete "in claim 6, wherein a filter" and insert "in claim 1, wherein a second filter".

Claim 17, delete:

"the plenum chamber; wherein the flow of the one or more gases into the main chamber and the flow of sterilant vapour out of the main chamber pass through the same filter."

Insert:

"the plenum chamber; and

a sterilant vapor generator disposed within the main chamber, the sterilant vapor generator being configured to generate the sterilant vapor and to supply the sterilant vapor to the main chamber, wherein the flow of the one or more gases into the main chamber and the flow of sterilant vapor out of the main chamber pass through the same filter."

Cancel claims 18 and 22.

2. The following is an examiner's statement of reasons for allowance:

The closest prior art of record does not teach suggest or disclose a system and enclosure as set forth in independent claims 1 and 17 comprising a main chamber, a plenum chamber, and a filter separating the main chamber and plenum chamber, wherein a pump for the plenum chamber delivers air into the plenum chamber then to the main chamber via a filter as well as another means for drawing gas from the enclosure in a manner to maintain a negative pressure in said chambers and cause sterilant vapor to flow from the main chamber to the plenum chamber via the filter, wherein the flow of gas into the main chamber and the flow of vapor out of the main chamber pass through the same filter; and further comprising a sterilant vapor generator is disposed within said main chamber.

Drinkwater (International Publication No. WO 02/11774) discloses an enclosure 10 for carrying out an operation under sterile conditions, the enclosure comprising:

A main chamber;

A plenum chamber;

A filter 11 separating the plenum chamber from the main chamber;

A pump 18 for the plenum chamber and capable of delivering air into the plenum chamber and then through the filter to the main chamber to create a filtered flow of air through the main chamber; and

A means for drawing gas from the enclosure 10 via an outlet that comprises a fan 16 located in a conduit connected to the outlet that is capable of creating a flow of sterilant vapor; and

Drinkwater does not disclose a means for drawing gas from the enclosure to cause sterilant vapor to flow from the main chamber to the plenum chamber via the filter, wherein the flow of gas into the main chamber and the flow of vapor out of the main chamber pass through the same filter, or a sterilant vapor generator disposed within said main chamber.

Adams (International Publication No. WO 03/082355) discloses an enclosure for carrying out an operation under sterile conditions, wherein the enclosure comprises a first apparatus disposed within the enclosure for generating and delivering a sterilant vapor from a supply held within the main chamber to be distributed throughout the enclosure to sterilize the surfaces of the enclosure (Figure 11). Adams does not disclose a main chamber, a plenum chamber, and a filter separating the main chamber and plenum chamber, wherein a pump for the plenum chamber delivers air into the plenum chamber then to the main chamber via a filter as well as another means for drawing gas from the enclosure in a manner to maintain a negative pressure in said chambers and cause sterilant vapor to flow from the main chamber to the plenum chamber via the filter.

Krainiak et al. (U.S. Patent No. 6,711,705) discloses a system and enclosure comprising a main chamber, a plenum chamber, and a filter separating the main chamber and plenum chamber (Figure 6), wherein a pump (31) for the

Art Unit: 1797

plenum chamber delivers air into the plenum chamber then to the main chamber via a filter (Figure 5). Krainiak does not disclose a means for drawing gas from the enclosure in a manner to maintain a negative pressure in said chambers and cause sterilant vapor to flow from the main chamber to the plenum chamber via the filter, wherein the flow of gas into the main chamber and the flow of vapor out of the main chamber pass through the same filter, wherein the flow of air into the main chamber and the flow of sterilant vapor out of the main chamber pass through the same filter, or a sterilant vapor generator is disposed within said main chamber.

Therefore, the closest prior art of record does not teach suggest or disclose, alone or in combination, a system and enclosure as set forth in independent claims 1 and 17 comprising a main chamber, a plenum chamber, and a filter separating the main chamber and plenum chamber, wherein a pump for the plenum chamber **delivers air into the plenum chamber then to the main chamber via a filter** as well as another means for drawing gas from the enclosure in a manner to maintain a negative pressure in said chambers and cause sterilant vapor to **flow from the main chamber to the plenum chamber via the filter, wherein the flow of gas into the main chamber and the flow of vapor out of the main chamber pass through the same filter; and further comprising a sterilant vapor generator is disposed within said main chamber.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled

"Comments on Statement of Reasons for Allowance."
